

Chemistry – Unit 9 Objectives

Stoichiometry I

By the time we finish this unit, you should be able to do these:

<p>1. Review Concepts:</p> <p>a) Determine the molar mass of a substance and use it to convert between the mass and mole measurements. (U5)</p> <p>b) Relate coefficients and formulas to a molecular diagram of a reaction. (U7)</p> <p>c) Given a chemical reaction stated in words, write a balanced chemical equation. (U7)</p>	
<p>2. Starting with</p> <ul style="list-style-type: none">• a balanced chemical equation,• the number of moles of a reactant or product, <p>determine the number of moles of any other reactant or product involved.</p>	
<p>3. Starting with</p> <ul style="list-style-type: none">• a balanced chemical equation,• the mass of a reactant or product, <p>determine the mass of any other reactant or product involved.</p>	

<p>4. Starting with</p> <ul style="list-style-type: none"> • a balanced chemical equation, • the mass of one reactant, • mass of product actually produced <p>calculate the percent yield for the reaction.</p>	
<p>5. Starting with</p> <ul style="list-style-type: none"> • a balanced chemical equation, • the mass of the reactants <p>determine</p> <ul style="list-style-type: none"> • which reactant is limiting, and why it limits the reaction, • the theoretical yield of a product. 	
<p>6. Given a balanced chemical equation and the amounts of reactants, sketch molecular diagrams to represent the reaction mixture before and after the reaction.</p>	
<p>Vocabulary to understand, distinguish, and use correctly:</p> <ul style="list-style-type: none"> • Stoichiometry • Stoichiometric mole ratio • Theoretical yield • Actual yield • Percent yield • Limiting reactant
